SDE-3 AT WHATFIX · BANGALORE

Building backend systems and AI platforms that scale to millions of users.

Software engineer with over 5 years of experience in distributed systems, microservices and agentic AI.

ABOUT

I design and build scalable backend systems and distributed services for enterprise applications. My toolkit centers on Java, Spring Boot, Redis, Kafka and Cassandra, and lately I've been applying LLMs, semantic search and tool-calling agents to real product problems.

EXPERIENCE

Whatfix, Bangalore · Jul 2021 – Present

SDE-3

Jul 2025 – Present

- Building an **agentic AI process-discovery platform** with custom in-house tools that analyzes hundreds of user sessions, finds recurring workflows and reconstructs business processes across enterprise apps.
- Designed a **distributed system** that runs the agentic pipeline in parallel across user session data, cutting end-to-end analysis time.
- Engineered an AI system that infers user intent from journey context and recommends relevant workflows in real time, **reducing task completion time by 95%** across 100+ enterprise applications.
- Built an async workflow-intelligence pipeline (Kafka, Redis, Cassandra, LLMs) generating AI descriptions for **10K+ workflows** per enterprise account.
- Architected a multilingual semantic element detection system using embedding similarity, serving **1M+ users at 90% accuracy** with low-latency inference via Redis caching.
- Authored system design documents and mentored junior engineers on scalable backend architecture.

SDE-2

Jan 2023 – Jun 2025

- Led a 2-person team improving element detection across 10+ applications for **1M+ users**.
- Built a **release validation framework** (Java, Playwright) that automatically analyzes enterprise releases and catches production-impacting issues faster.
- Enhanced computer vision algorithms with OpenCV and drove product integration with 3 engineers.
- Shipped a rule-based content visibility framework for adaptive UI content.
- Resolved **250+ production issues** and **30+ critical escalations** through deep root-cause analysis and long-term fixes.

SDE-1

Jul 2021 – Dec 2022

- Built the **Smart Context API**, automating configuration-based page tag updates and **removing 100% of manual intervention** across enterprise deployments.
- Automated migration of **200+ enterprise scripts** to Manifest V3 using LLM-driven code transformation, saving 200+ engineering hours.

SKILLS

Languages
Java · C++ · Python · SQL

Backend & distributed systems
Spring Boot · REST APIs · Microservices · Redis · Kafka · Cassandra · Elasticsearch

AI
LLMs · Agentic AI · Tool calling · Semantic search

Core engineering
Data Structures & Algorithms (DSA) · Low-Level Design (LLD) · High-Level Design (HLD)

Cloud & DevOps
AWS (EC2, S3, Lambda) · Docker · Kubernetes · Jenkins · CI/CD · Git

EDUCATION

B.Tech, Computer Science — 2021
Lovely Professional University
CGPA **8.8** / 10

AWARDS

Spot Award — 2023
For leading the computer vision charter and resolving high-severity production incidents.

Best Success Engineer — 2021, 2022
For resolving critical production issues, two years running.
