Summary

Software Engineer with **5 years of experience** building scalable **backend systems** and **distributed services** for enterprise applications. Experienced in designing **microservices**, caching solutions, and large-scale backend platforms serving **1M+ users**. Strong expertise in **Java**, **Spring Boot**, **Redis**, **Cassandra**, and **distributed system design**, with experience building multilingual semantic search and **AI-powered platforms**.

Skills

Languages: Java (Primary), C++, Python, SQL
Backend & Distributed Systems: Spring Boot, REST APIs, Microservices, Redis, Kafka, Cassandra, Elasticsearch
Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, Jenkins, CI/CD, Git
AI Technologies: LLMs, Agentic AI, Tool Calling, Semantic Search

Work Experience

SDE-3 Jul 2025 – Present
Whatfix, Bangalore

- Building an **Agentic AI**-powered process discovery platform with custom in-house tools to analyze hundreds of user sessions, identify recurring workflows, and reconstruct business processes across enterprise applications
- Designed and built a **distributed system** enabling parallel execution of the **Agentic AI pipeline** to analyze user session data across hundreds of users, reducing end-to-end analysis time
- Engineered an **AI-powered system** that infers **user intent** from **journey context** and **workflow descriptions** to recommend relevant workflows in **real time**, reducing task completion time by **95%** across **100+ enterprise applications**
- Designed and built an **asynchronous workflow intelligence pipeline** using **Kafka**, **Redis**, **Cassandra**, and **LLMs** to generate AI-powered descriptions for **10K+ workflows per enterprise account**, powering workflow recommendation and intent inference capabilities
- Architected and led the development of a **multilingual semantic element detection system** using embedding-based similarity for cross-language element matching, serving **1M+ users** with **90% accuracy** and enabling low-latency inference using Redis caching and distributed processing
- Authored **system design documents** and mentored junior engineers on scalable backend architecture

SDE-2 Jan 2023 – Jun 2025
Whatfix, Bangalore

- Led a 2-member team to enhance **element detection algorithms** across **10+ applications**, delivering **low-latency, high-accuracy detection** at scale for **1M+ users**
- Developed a **release validation framework** using **Java** and **Playwright** to automatically analyze enterprise releases, eliminating manual verification and accelerating detection of production-impacting issues
- Enhanced **Computer Vision algorithms** using OpenCV and drove product integration alongside **3 engineers**
- Shipped a **rule-based content visibility framework**, enabling configuration of adaptive UI content visibility
- Resolved **250+ production issues** and **30+ critical escalations**, performing deep root-cause analysis and implementing long-term fixes to improve platform reliability and availability

SDE-1 Jul 2021 – Dec 2022
Whatfix, Bangalore

- Built the **Smart Context API** to automate configuration-based page tag updates, removing **100% manual intervention** across enterprise deployments
- Automated migration of **200+ enterprise scripts** to **Manifest V3** using **LLM-driven code transformation**, saving **200+ engineering hours**

Education

Lovely Professional University **CGPA: 8.8/10**
B.Tech in Computer Science 2021

Awards

- **Spot Award (2023)**: For leading the Computer Vision charter and resolving high-severity production incidents
- **Best Success Engineer (2021, 2022)**: Recognized for resolving critical production issues
